

CAREER POINT UNIVERSITY

Assignment File

SEMESTER: - 1st

SUBJECT NAME: - Web Technology

SUBJECT CODE: - CAL815

NAME OF COURSE: - Masters of Computer Applications

SUBMITTED BY:

Aditya Sharma

K26798

SUBMITTED TO:

Mannu Soni Ma'am

Assistant Professor

SCHOOL OF COMPUTER APPLICATIONS

2025-26

1. A store gives a 10% discount if the total purchase is above ₹500. Write a PHP program that checks the total purchase amount and prints whether the customer gets a discount or not.

```
<!DOCTYPE html>
<html>
<body>
<form method="post">
  <label>Enter total purchase amount: </label>
  <input type="number" name="amount" required>
  <input type="submit" value="Check Discount">
</form>

<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
  $amount = $_POST["amount"];
  if ($amount > 500)
    echo "You get a 10% discount!";
  else
    echo "No discount available.";
}
?>
</body>
</html>
```

2. A student's exam score is given. Write a PHP program using conditional statements to print the grade based on marks:

- a) 90+ → A
- b) 75–89 → B
- c) 50–74 → C
- d) Below 50 → Fail

```
<!DOCTYPE html>
<html>
<body>
<form method="post">
  <label>Enter your exam score: </label>
  <input type="number" name="marks" required>
  <input type="submit" value="Check Grade">
</form>

<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
    $marks = $_POST["marks"];

    if ($marks >= 90)
        echo "Grade: A";
    elseif ($marks >= 75)
        echo "Grade: B";
    elseif ($marks >= 50)
        echo "Grade: C";
    else
        echo "Grade: Fail";
}
?>
</body>
</html>
```

3. A teacher wants to check if a roll number is even or odd.
Write a PHP program to solve this.

```
<!DOCTYPE html>
<html>
<body>
<form method="post">
  <label>Enter Roll Number: </label>
  <input type="number" name="roll" required>
  <input type="submit" value="Check">
</form>

<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
    $roll = $_POST["roll"];

    if ($roll % 2 == 0)
        echo "Roll Number $roll is Even.";
    else
        echo "Roll Number $roll is Odd.";
}
?>
</body>
</html>
```

4. Write a PHP program that checks whether a person is eligible to vote (age ≥ 18).

```
<!DOCTYPE html>

<html>

<body>

<form method="post">

    <label>Enter your age: </label>

    <input type="number" name="age" required>

    <input type="submit" value="Check Eligibility">

</form>

<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {

    $age = $_POST["age"];

    if ($age >= 18)

        echo "You are eligible to vote.";

    else

        echo "You are not eligible to vote.";

}

?>

</body>

</html>
```

5. Create a PHP program that takes input as "red", "yellow", or "green" and prints the appropriate traffic signal message.

```
<!DOCTYPE html>

<html>

<body>

<form method="post">

    <h3>Select a color:</h3>

    <input type="radio" name="color" value="red" required> Red <br>

    <input type="radio" name="color" value="yellow"> Yellow <br>

    <input type="radio" name="color" value="green"> Green <br><br>

    <input type="submit" value="Check Signal">

</form>

<?php

if ($_SERVER["REQUEST_METHOD"] == "POST") {

    $color = $_POST["color"];

    echo match($color) {

        "red" => "STOP!",

        "yellow" => "Ready to go.",

        "green" => "GO!",

        default => "Invalid signal."

    }

?>

</body>

</html>
```

6. Write a PHP program using a loop to print numbers 1 to 10.

```
<?php
$num = 7;

for ($i = 1; $i <= 10; $i++) echo "$num x $i = " . $num * $i . "<br>";

?>
```

7. Write a PHP program that takes a number (say 7) and prints its multiplication table (up to 10).

```
<?php
$num = 7;

for ($i = 1; $i <= 10; $i++)

    echo "$num x $i = " . $num * $i . "<br>";

?>
```

8. Write a PHP program using a loop to calculate the sum of the first 20 natural numbers.

```
<?php
$sum = 0;

echo "The sum of the first 20 natural numbers is = " . ($n * ($n + 1)) / 2;

?>
```

9. Write a program that calculates the factorial of a number using a loop.

```
<?php
$num = 5;
$fact = 1;
for ($i = 1; $i <= $num; $i++) {
    $fact *= $i;
}
echo "Factorial of $num is $fact";
?>
```

10. Write a program that prints the Fibonacci series up to 10 terms.

```
<?php

$n1 = 0;

$n2 = 1;

echo "$n1 $n2 ";

for ($i = 3; $i <= 10; $i++) {

    $n3 = $n1 + $n2;

    echo $n3 . " ";

    $n1 = $n2;

    $n2 = $n3;

}

?>
```

11. Write a PHP program that prints numbers from 10 down to 1 using a loop.

```
<?php

for ($i = 10; $i >= 1; $i--) {

    echo $i . " ";

}

?>
```

12. Write a PHP program to print a diamond pattern using nested loops, for example (size 5):

```

    *
  ***
 *****
*****
*****
 *****
  ***
    *
```

```
<?php

// Upper half
for ($i = 1; $i <= $size; $i++) {

    echo str_repeat("&nbsp;", $size - $i);

    echo str_repeat("*", 2 * $i - 1);

    echo "<br>";

}

// Lower half
for ($i = $size - 1; $i >= 1; $i--) {

    echo str_repeat("&nbsp;", $size - $i);

    echo str_repeat("*", 2 * $i - 1);

    echo "<br>";

}

?>
```

13. Store marks of 5 students in an array. Write a program that calculates and prints the average marks.

```
<!DOCTYPE html>

<html>

<body>

<h3>Enter marks of 5 students:</h3>

<form method="post">

    <input type="number" name="marks[]" required placeholder="Student 1"><br><br>

    <input type="number" name="marks[]" required placeholder="Student 2"><br><br>

    <input type="number" name="marks[]" required placeholder="Student 3"><br><br>

    <input type="number" name="marks[]" required placeholder="Student 4"><br><br>

    <input type="number" name="marks[]" required placeholder="Student 5"><br><br>

    <input type="submit" value="Calculate Average">

</form>

<?php

if ($_SERVER["REQUEST_METHOD"] == "POST") {

    $marks = $_POST["marks"]; // array of input marks

    $sum = array_sum($marks);

    $average = $sum / count($marks);

    echo "The average marks of 5 students is: $average";

}

?>

</body>

</html>
```

14. Create an array to store details of employees (Name, Age, Salary). Write a program to print all employee details one by one.

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<title>Employee Cards</title>
<style>
  *{
    margin: 0;
    padding: 0;
    box-sizing :border-box;
  }
  html,body{
    width :100%;
    height :100%;
  }
  body { font-family: Arial; background:linear-gradient(217deg, rgb(255 0 0 / 0.8),
transparent 70.71%); display:flex; flex-wrap:wrap; gap:20px; padding:30px;}
  .card { background:white; border-radius:10px; box-shadow:0 4px 8px
rgba(0,0,0,0.1);height:200px; width:220px; padding:20px; text-align:center; transition:0.3s;}
  .card:hover { transform:translateY(-5px); box-shadow:0 8px 16px rgba(0,0,0,0.15);}
  .name { font-size:20px; font-weight:bold; color:#333;}
  .detail { color:#555; margin-top:8px; font-size:15px;}
  form { width:100%; margin-bottom:30px; }
  input { margin:5px; padding:5px; }
</style>
</head>
<body>

<!-- Employee Input Form -->
<form method="post">
  <input type="text" name="name" placeholder="Name" required>
  <input type="number" name="age" placeholder="Age" required>
  <input type="number" name="salary" placeholder="Salary" required>
  <input type="submit" name="add" value="Add Employee">
```

```
</form>
<form method="post" style="margin-bottom:20px;">
    <input type="submit" name="clear" value="Clear All Employees">
</form>
```

```
<?php
session_start();
if (isset($_POST['clear'])) {
    $_SESSION['employees'] = []; // Clear the array
    header("Location: " . $_SERVER['PHP_SELF']);
    exit();
}
// Initialize employees array in session if not exists
if (isset($_POST['add'])) {
    $newEmp = [
        "Name" => $_POST['name'],
        "Age" => $_POST['age'],
        "Salary" => $_POST['salary']
    ];
    $_SESSION['employees'][] = $newEmp;
    // Redirect to the same page to prevent duplicate on refresh
    header("Location: " . $_SERVER['PHP_SELF']);
    exit();
}
// Display all employees
foreach ($_SESSION['employees'] as $emp): ?>
    <div class="card">
        <h1 class="name"><?= htmlspecialchars($emp["Name"]) ?></h1>
        <p class="detail">Age: <?= htmlspecialchars($emp["Age"]) ?></p>
        <p class="detail">Salary: ₹<?= number_format($emp["Salary"]) ?></p>
    </div>
<?php endforeach; ?>

</body>
</html>
```

15. Store information of at least 3 products (Product Name, Price, Quantity) in an array. Write a program to display all product details in a tabular format.

```
<!DOCTYPE html>

<html>

<head>

    <title>Product Details</title>

    <style>

        table { border-collapse: collapse; width: 60%; margin: 20px auto; }

        th, td { border: 1px solid #333; padding: 10px; text-align: center; }

        th { background-color: #f04; color: white; }

    </style>

</head> <body>

<?php

$products = [

    ["Name" => "Laptop", "Price" => 45000, "Quantity" => 5],

    ["Name" => "Smartphone", "Price" => 20000, "Quantity" => 10],

    ["Name" => "Headphones", "Price" => 1500, "Quantity" => 15]

];

?>

<table>

    <tr>

        <th>Product Name</th>

        <th>Price (₹)</th>

        <th>Quantity</th>

    </tr>

    <?php foreach ($products as $product): ?>
```

```

        <tr>

            <td><?= htmlspecialchars($product["Name"]) ?></td>

            <td><?= number_format($product["Price"]) ?></td>

            <td><?= $product["Quantity"] ?></td>

        </tr>

    <?php endforeach; ?>
</table>

</body>

</html>

```

16. Create an array of student names. Write a program that searches for a given student name. If found, print “Student Found”, otherwise print “Not Found”.

```

<!DOCTYPE html>

<html>

<head>

    <title>Student Search</title>

</head>

<body>

    <h3>Search for a Student</h3>

    <form method="post">

        <input type="text" name="student" placeholder="Enter student name" required>

        <input type="submit" value="Search">

    </form>

```

```
<?php

$students = ["Aditya", "Neha", "Ravi", "Anjali", "Rahul",]; // Array of student names

if ($_SERVER["REQUEST_METHOD"] == "POST") {

    $search = trim($_POST["student"]); // Get input and remove extra spaces

    // Case-insensitive search

    if (in_array($search, $students)) {

        echo "<p>Student Found 
```
